

Project 4 Writeup

Instructions

- Provide an overview about how your project functions.
- Describe any interesting decisions you made to write your algorithm.
- Show and discuss the results of your algorithm.
- Feel free to include code snippets, images, and equations.
- List any extra credit implementation and result (optional).
- Use as many pages as you need, but err on the short side.
- **Please make this document anonymous.**

Project Overview

The goal of this project was to:

- 1) Design the architecture for a deep learning model for 15-scene recognition to achieve at least 65% accuracy with less than 15M parameters.
- 2) Fine tune the vgg model by writing a classification head with less than 15M trainable parameters to achieve at least 85% accuracy.

Results

Best classification performance:

Task 1: 66.97% accuracy (epoch 45)

Task 2: 88.51% accuracy (epoch 43)

no extra credit

myModel model summary

```

mic library libnvinfer.plugin.so.6
Dataset mean: [0.4594, 0.4594, 0.4594]
Dataset std: [0.2529, 0.2529, 0.2529]
Found 1500 images belonging to 15 classes.
Found 2985 images belonging to 15 classes.
Model: "your_model"

```
